JOWL LIFT

FIRM & TONE THE JAWLINE

The CACI Jowl Lift facial has been developed to specifically target muscle laxity around the jawline.

The CACI Jowl Lift facial uses new Quad Probe applicators designed to double the lifting action of the CACI treatment system thereby enhancing results and reducing treatment time.

This 15 minute facial treatment helps to improve the appearance of sagging jowls by using the Quad Probes which have been specifically developed to target the muscles around the jawline.

The Quad Probes emit tiny electrical impulses to lift, firm and redefine facial contours.

To maximise the firming effect, the Quad Probes are used in conjunction with unique serum filled cotton buds that contain a powerful skin firming formulation.

The CACI Jowl Lift treatment is completely painless, although some clients may experience a slight tingling sensation or metallic taste, which is perfectly normal.

For best results a course of 10 treatments* is recommended over a 5 week period.

Once you have completed your course, results can be maintained with a monthly top up treatment.

*The number of CACI Jowl Lift treatments required may vary according to individual client needs.
